

ESCHBACH BUFFALO SAFETY

Type 1 / Level 3

The ideal choice for indoor firefighting with a built-in safety reserve

The applied arrows not only improve the visibility of the hose but also indicate the safe route to the exit in conditions of extremely poor visibility, such as in a smoke-filled environment.

The directional arrows are made of a combination of phosphorescent and reflective elements. The phosphorescent elements charge in daylight and glow in the dark, while the reflective elements reflect incoming light and light sources.

An additional red sleeve mounted on the hose side, as well as a green sleeve at the manifold end, reduce the risk of confusion and prevent incorrect deployment. The hose also features an eye-catching orange/yellow scheme colour and is available in size 42 mm. The Buffalo Safety is specifically designed for use in a hose pack.

ADVANTAGES

- Directional arrows indicate the escape route to the exit
- Arrows are visible even in extremely poor visibility conditions
- Additional red (nozzle) and green (exit/distributor) sleeves
- For use in a hose assembly—pre-assembled nozzle, shut-off valve if required
- High-visibility signal colours in orange/yellow
- Exceptional abrasion resistance and minimal bending radius
- Available in size 42 mm
